Cast Iron Welding & Metal Stitching Repairs

Tug Rope Guard

A world-wide Marine company requested our specialised services when the port propeller rope guard of one of their fleet of tugs needed urgent repairs due to severe cavitation.

Repairs were undertaken by way of our Lloyds approved fusion welding procedures for cast iron, introducing cast rods to fill the many holes in the component, before grinding to the correct profile and machining back to correct tolerances.

The guard was then witnessed under pressure test by Lloyds for certification purposes, prior to a final cleaning, and coating of red oxide primer, before dispatch.

For any urgent Marine repairs contact us for a free survey/quotation.

- Full Pressure Testing
- Full Crack Detection
- Fixed Cost Repairs
- Lloyds Welding Procedure
- Classification Certificate
- 12 Months Guarantee
