Cast Iron Welding and Engineering

Industrial Printing Press

An enquiry was received from a large company that manufacture and print packaging boxes for many major brands.

The Maintenance Manager was in need of help to repair a large printing press, which was in-situ and could not be removed from site. The other problem was that it was a machine that was used daily to meet with production deadlines. The press was broken and cracked on the drive and running wheels of the printer.

Our engineers travelled to site and carried out emergency repairs over the weekend period, fitting a new section of Cast Iron and stitching into place, Final testing and then up and running on Monday morning!

This repair was a great success!

It has now given our client a fully reconditioned machine which was a fraction of the new replacement cost and no loss of production time.

For any Emergency Industrial Repairs - contact us for a free initial survey/quotation.

- Free Survey/Quotation
- Full Crack Detection
- Fixed Cost Repairs
- Casting of Parts if Required
- 24 Hour Emergency Service
