Cast Iron Welding and Engineering

## Lamp Post—Trinity Square London

Slinden Services recently received an ‘SOS call’ from a building contractor in London. A lorry had reversed into a Cast Iron Lamp Post that was due to be in the background of a scene of the latest James Bond Movie ‘*Skyfall*’.

Daniel Craig was set to arrive to film a chase scene around Trinity Square, with the Lamp Post clearly visible in this important scene.

10 Trinity Square was the former home of the Port of London Authority, the governing body of London’s waterways and docklands, established in the 1900s to oversee what were then the busiest and most important docks in the world. The building was also badly damaged in WWII, but rebuilt to its former glory.

10 Trinity Square is situated in the heart of the City of London, an iconic and imposing structure that has been the subject of a comprehensive refurbishment programme, part of a multi-million dollar building project incorporating luxury hotel, private residences and exclusive

members’ club.

- On Site Inspection/Quotation
- Lloyds Welding Procedure
- Full Shot Blasting
- Painting As Required
- Re-Casting Service
- 2 Year Guarantee

Cast Iron Welding and Engineering

## Lamp Post—Trinity Square London

Early in 2012, our Engineers travelled to London to collect a very badly damaged Lamp Post and bring it up to the Midlands for extensive urgent repairs. The Lamp Post is one of many imposing and ornate street lights around Trinity Square.

The Lamp Post was thoroughly inspected, shot blasted and subsequently repaired using our Lloyds Register approved welding procedure for Cast Iron. Careful dismantling of many broken pieces was undertaken prior to repairs. After welding repairs of all the separate components, final cleaning and painting - a rebuild of the completed item was undertaken at our premises to ensure a correct fit back on site in London—ready for the filming to proceed! Just in Time!
